

# “Nonlinear MHD simulations for the Reversed Field Pinch with active feedback”

R. Paccagnella

Consorzio RFX and CNR

- *3D MHD studies using (modified) DEBS code*
- **Resistive Wall studies (external kinks)**
- **Successful Feedback control of modes (external and internal). Drive to selected Single Helical states.**

## DEBS code:

$$\frac{\partial A}{\partial t} = -\eta J + \mathbf{v} \times \mathbf{B}$$
$$\rho \left( \frac{\partial \mathbf{v}}{\partial t} + (\mathbf{v} \cdot \nabla) \mathbf{v} \right) = \mathbf{J} \times \mathbf{B} - \nabla p - \mathbf{v} \nabla^2 \mathbf{v}$$

- + mass evolution equation
- + pressure evolution equation

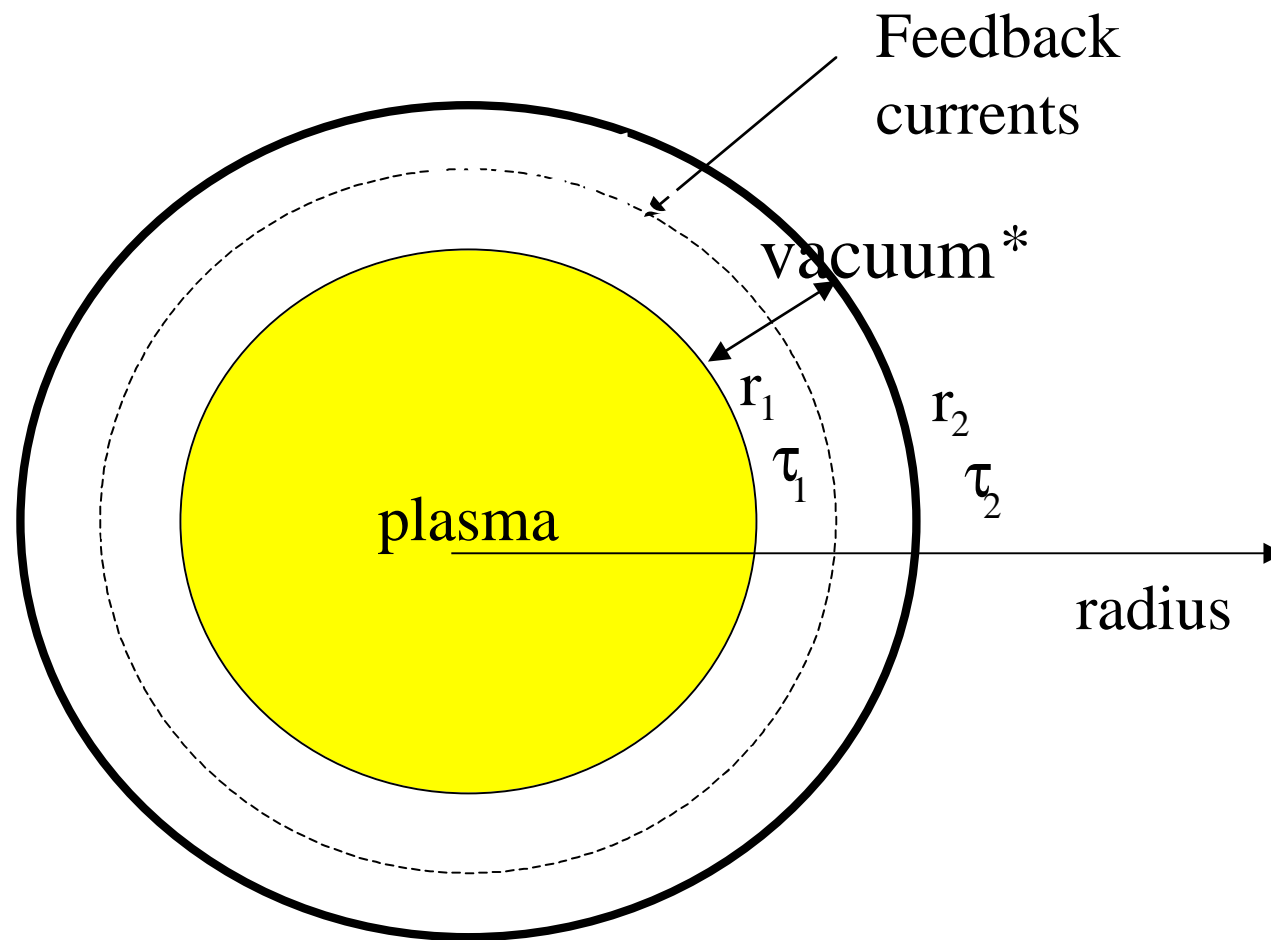

- \*cylindrical geometry
- \*3D : r finite difference,  $\theta$  and z Fourier
- \*Pseudospectral: use of numerical FFT

+

In. Cond. at  
t=0

B.C

$\eta$ , v profiles  
specified

\*In vacuum analytical Bessel Functions solutions  $I_m(kr)$  and  $K_m(kr)$

# BC in DEBS with feedback

- Thin shell BC at each metallic wall:

$$[B_n]=0 \quad \left[ \frac{\partial B_n}{\partial n} \right] = \tau_w \frac{\partial B_n}{\partial t} \quad \text{up to 2 resistive walls}$$

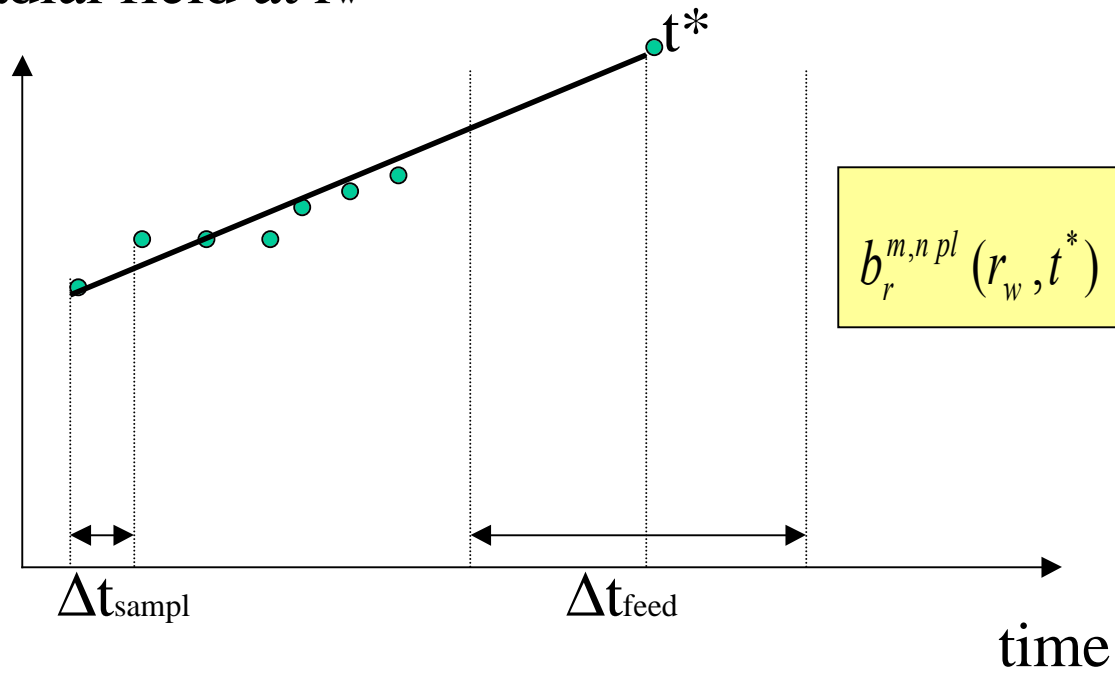

- Condition at the coils:

$$[n \times B] = \mu_o \frac{r}{K}$$

- coils field at plasma edge:

$$b_r^{feed}(r_w) = \frac{im}{r_w} a_\phi^{m,n}(r_w) J_\phi^{m,n} + \frac{in}{R} a_\theta^{m,n}(r_w) J_\theta^{m,n}$$

- radial field at  $r_w$

• Linear interpolation of sampled data

• fixed feedback during  $\Delta t_{\text{feed}}$  time window

MH case

**Drive of  $n=-7$  mode  
for a Multi-helicity  
case (at low dissipation**

$$S=3.3 \cdot 10^3$$

$$P=0.5$$

and **short** wall time constants

$$\tau_1 = 0.05$$

$$\tau_2 = 0.06$$

Careful adjustment of the gains  
during the initial phase needed

Successful **drive** and  
sustainment of  $m=1$   $n=-7$

# Conclusions

- RWM studies show the growth of low  $n$  modes after few (2-3) wall times
  - good predictions of the linear theory for the growth rates and dominant modes
- 
- **Feedback of external modes** has been shown to be **possible**, at  $R/a=4$  and different wall time
  - a few  $n$ 's (1,2,3,4,5) should be considered
  - **Drive of selected Single Helical state is possible even starting from MH states**
